

Project Design Phase Solution Architecture

Date	04 July 2026
Team ID	
Project Name	Rising Waters: A Machine Learning Approach to Flood Prediction
Maximum Marks	4 Marks

Solution Architecture:

This architecture includes all major components expected in a solution architecture: data sources, processing, machine learning, storage, visualization, notifications, and end users, while clearly illustrating the flow from raw environmental data to actionable flood warnings.

- Describe the structure, characteristics, behaviour, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Example - Solution Architecture Diagram:
